Precautions for use of lighting equipment

Hold a plug when unplug. Otherwise it may cause the damage of cables or other parts. Keep flammable materials away from fixtures because fixtures will be very hot during lighting and right after turn-off. Otherwise may cause fire or burn.

★Precautions for use of HMI★

Before turning off HMI, please keep HMI turned on 10minutes at full Dimmer volume of Ballast. If you turn off HMI without this procedure, color temperature will be lower considerably. ※ Because HMI need very long time to recover the normal color temperature.

※When using Ballast, please keep each Ballast away to avoid overheat.

※We calculate Burn time fee for 8 hours a day for estimate. * No Burn time fee is charged for the light under 1.2kw.
※ Burn Time doesn't include tax.

★Warning for use of HMI★

Do not use at the unallowable angles because HMI fixtures generate high voltage and many electric parts are built-in. Use at unallowable angle could cause fixture damage, failure and bulb explosion. Ballast should be stored in safe place which does not receive the direct sunlight and also should avoid high temperature, humid vibration and impact shock. Incorrect use could cause fixture damage, failure and bulb explosion.

★Precautions for use of lighting equipment.★

Grasp a plug or connector when unplugging out the connector. Otherwise may cause the damage of cable or other parts. Keep flammable materials away from light because light will be very hot during lighting and right after turn-off. Otherwise may cause fire or burn.

※Tungsten light may drastically darken by life of bulb, or by the condition of lens and reflector. ARC·SYSTEM provides the light equipment in best condition.

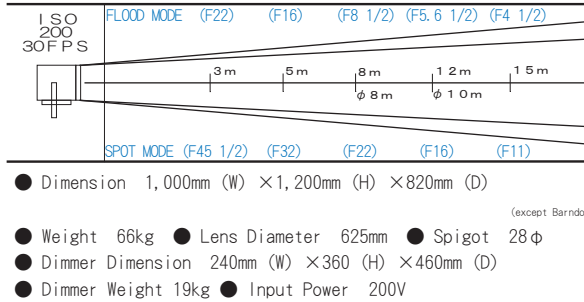

Please note that F-number in this catalog is the data calculated with equipment ARC·SYSTEM owns.

CHROMA FLEX

2P

Changing the art of
chroma key

Color choice for LED Ring Light : Blue , Green.
Available camera lens: 60.3 ~ 115.8mm.
This ring is removable easily.

Chroma Flex is the system which make Chroma key background by using blue or green LED Ring Light for standard lens and particular reflecting gray cloth for back ground. This cloth looks normal gray color for human eyes. But for camera, this cloth looks uniform brightness and chroma, and it becomes high quality background source to edit or composite .

Chroma Flex doesn't need traditional lighting for using chroma key set.

※The limit during operation at 100V is 2.75KVA.

★Precautions for use of Generators★

- Fuel is “Regular gasoline” only for all Generators. Please be careful not to put sand, dust or any other allotrio into fuel tank.
- Never refuel during operation.
- Please put Generators on level place.
- Please do not cover Generators with poly board, plywood, sheet during operation. It may cause overheat or any other troubles.
- Please do not move Generators during operation. It may cause engine stop. Especially during operation on camera car, sidling G-forces may cause engine stop.

[Precautions for using 900W / 1.6K Generators.]

- Before starting engine, please press the switch on the upper part of the filler cap to ON. If the engine does not start, please open filler cap and start it again. If Generator is tilted, engine cannot start. Engine stops if the Generator gets tilted during operation.
- When using 2 Generators in parallel, please connect parallel cables and match frequencies before turning them on. Please check that the pilot lamp is green. If pilot lamp is red, stop the engine, disconnect parallel cables and restart it.

[Precautions for using 2.8kw Generators]

- When using 2 Generators in parallel, please connect parallel cables and match frequencies before turning them on. Please check that the pilot lamp is green. If the pilot lamp is red, stop the engine, disconnect parallel cables and restart the engine with Eco throttle on. (Single running is needed because the microcomputer remembers parallel mode)
- Since the air inlet is located underneath Generator, please cover the ground with plywood or something else before starting engine for the use in the park or on the beach.

[Precautions for using 5.5kw Generators]

- Never change voltage or frequency during operation
- When using Generators for high output, Please turn off Eco Throttle to reduce the voltage variation.

※1 When using HMI Magretic Balast, please choose frames per second and shutter angle according to the formula. (Shutter angle = frames per second x 360 ÷ frequency)

※2 For shooting HS movie more than 60 frames per seconds with HMI Electrical Ballast (FF mode), we recommend 2.5kw fixture or more.

※3 When using ARRI SUN with HMI Electrical Ballast (FF mode), please focus the light on the object and shoot below 100frames per second.

※4 When using ARRI SUN with HMI Electrical Ballast (300Hz mode), please focus the light on the object and shoot below 150frames per second with shutter angle 180° .

※5 Please set the dimmer of the Ballast at maximum for High Speed Shooting.

Precautions for safety use!!

Fixture

- ① Please check electric Voltage (V) and Current (A).
- ② Please check the following points about the place to set the equipments.
 - Please check if there is a need of any protective items.
 - Please check about prevention against overturn.
 - Please check if there are sprinklers or fire alarm sensors above lighting fixtures.
 - Please check if there is something flammable above fixtures.
 - Please check if there is something flammable in front of fixtures.
- ③ Please use the cables which are long enough.
- ④ Please set the fixtures at the allowable angle.
- ⑤ Since fixtures generate harmful ultraviolet light, please don't remove back-cover or lens.
- ⑥ Hold a plug or a connector when unplugged.
- ⑦ Shutter and Scrim are not available for ARRI SUN.
- ⑧ Shutter is not available for ARRI-X.
- ⑨ Please do not attach paper or combustible tape on the fixtures.
- ⑩ Please set the lens outmost from bulb when you turn off the fixture.
(Please set diaphragm maximum.) Otherwise lens might be broken by temperature change.
- ⑪ Please read "Precautions" and "Warning about Ballast" on page 4.
- ⑫ Please ground to prevent electric shock caused by electric leak.

Stand

- ① Please check following points about the place to set the stands.
 - Please check if there is a need of any protective items.
 - Please check if there are prevention measures against overturn.
- ② Please check the load capacity of the stand.
- ③ Please do not extend the stand to the maximum.
(Please extend the stand about 10cm shorter than the maximum.)
- ④ Please do not move the stand as extended.
- ⑤ Please be careful about center of gravity when using with the booms.

Grip

- ① Please be careful not to tighten the grips too much.
- ② Please check if there is anything to be protected. When you hold the cloth such on pipes, please be sure to use any protective items to cover pipes.
- ③ Please check about load capacity of Hanger and Border ropes.
- ④ The devices to prevent the grips dropping are necessary when you work on high.
- ⑤ After using radios or meters please return them to the original position.
(* Many radio earphones have been missing. Please be sure to return all the equipments.)
- ⑥ When using cloth, please be careful not to make break or blot.
- ⑦ When you use cloths, please be careful not to break or stain.

ATTENTION

Precautions for safety use!!

Tower

- ① Please protect the place which you set up the towers on by using protective mats.
- ② Please check the level of the place before setting up towers.
- ③ Please wear helmet and safety belt when you set up towers and work on them.
- ④ When you put the equipments on the towers or put them down from the towers, please be sure to prevent dropping the equipments. Also please check no one is around the towers.
- ⑤ Working on the towers in rain is dangerous and towers are slippery. Please wear the appropriate footwear.

Cable - Power Source

- ① Please use the cables which have enough current-carrying capacity, and use the cables under their load capacity.
- ② Please check voltage (100v or 200v) before turning on. If you change the cable connection, please check voltage again before turning on.
- ③ “Electrical Worker License” is required to connect cables with the switchboard. Please contact the building manager before connecting.
- ④ Please ground to prevent the electric shock caused by electric leak. Please be sure to use “Earth Leakage Breaker” when you operate around a pool or in rain.
- ⑤ Please use the cable protectors. Never step on the cables by foot or vehicle. Cable crush or damage may cause overheat or burn.

Expendable

- ① Please use such as frame retardant tracing paper when you diffuse the top light. Never use the normal tracing paper.
- ② When you diffuse 3kw or 5kw Border Light, or 4kw Main Light, please use frame retardant tracing paper. Depending on the way to use, even the retardant paper might catch fire. Do not cover the fixture with tracing paper.
- ③ You have to buy the filters, tapes and other expendable which get wet with rain even if they are unused.
- ④ Please do not tape up the lighting fixtures. Tapes cannot be removed after turning off because of the heat. If you need to tape up the facilities themselves, please check the surface and see if you can tape them up. Some wallpaper could be torn off by tapes.
- ⑤ When you use the water protection filter, please do not let the filter touch the fixture. Otherwise the filter easily melts.
